

## PANORAMIC DENTAL X-RAY

A Panoramic x-ray is a two dimensional dental x-ray that captures the entire mouth in a single image, including the teeth, upper and lower jaws, surrounding structures and tissues.

The Pano is an important diagnostic tool. It is a non invasive test that helps to diagnose and treat conditions. By covering a wider area than a conventional x-ray, it provides valuable information about nasal area, sinuses, tooth positioning, gum and bone irregularities, oral cysts, tumors, cancers, impacted teeth, TMJ, and other existing issues or potential problems.

The fee for the Pano is \$90.00 AND IS NOT COVERED BY YOUR INSURANCE.
